

Trinity Timberlands University Hill IFM Project

Attachment F

The project takes place on lands that have greater than 10% canopy cover. This has been verified through analysis of pre-existing inventory data, an inventory installed in 2013, and GIS analysis of the project area. The map below illustrates the Trinity Timberlands ownership area overlaid on aerial imagery. As noted in Attachment E, Part V.D., two percent of the land in the entire Trinity Timberlands LLC ownership is covered by roads, and less than one percent is in other non-forested cover.
