

Attachment L

The Project Area meets the requirements demonstrating that the growth and harvesting regime assumed for the baseline is financially feasible based on the qualifications in Section 6.2.1.3 of the Protocol. This includes providing evidence that similar baseline growth and harvesting activities have taken place on other properties within the Forest Project's Assessment area within the past 15 years by demonstrating that harvesting activities have taken place on at least one other comparable site with:

1. Slopes that do not exceed slopes in the Project Area by more than 10 percent;
2. An equivalent zoning class to the project area; and
3. Comparable species composition to the Project Area (i.e. within 20 percent of project species composition based on trees per acre).

Details about the Project Area and the comparable sites are shown in greater detail below. Maps of the harvest area as well as the Project Area can be seen in the following pages.

Harvest Name	Supersection	Assessment Area	Zoning	Slope	Associated Species
Project Area	Northern California Coast	Coast Redwood/Douglas-fir Mixed Conifer	TPZ - Timber Production Zone	34% rise	Bishop pine, CA laurel, Douglas-fir, western hemlock
	Southern Cascades	Southern Cascade Mixed Conifer			Aspen, CA laurel, CA mixed conifer, Douglas-fir
Harvest Area	Southern Cascades	Southern Cascade Mixed Conifer	TPZ - Timber Production Zone	28 % rise	Aspen, CA laurel, CA mixed conifer, Douglas-fir
