

Attachment G. Graph Portraying Baseline Onsite Carbon Stocks.

The graph below (Figure 1) illustrates the onsite initial carbon stocks as well as the baseline onsite carbon stocks. The primary assumption in the baseline model is that the growth and harvest regime abides by all legal constraints.

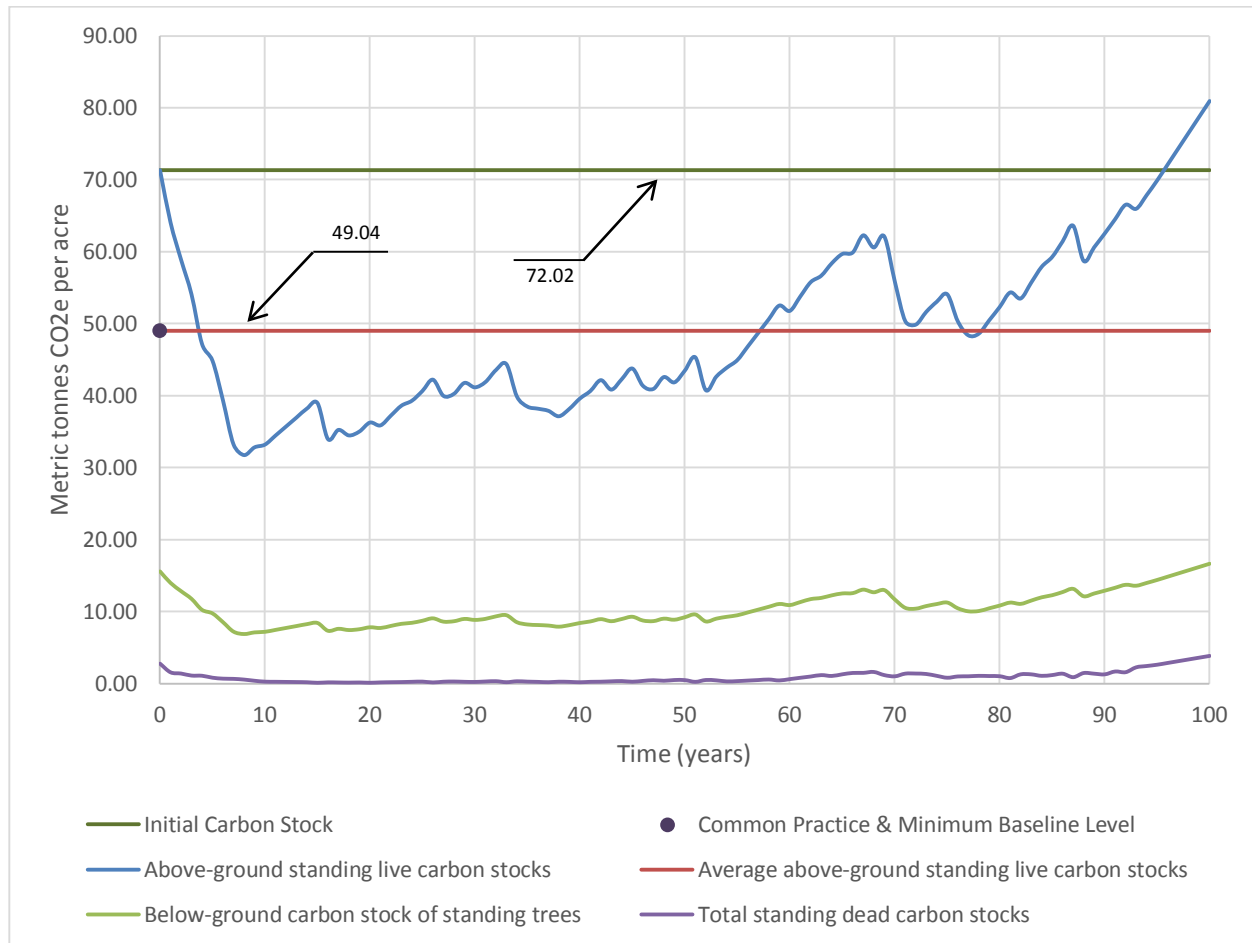

Figure 1. Baseline Onsite Carbon Stocks over 100 years

Attachment H. Chart Portraying All Onsite Baseline Carbon Stocks.

The chart below (Figure 2) illustrates the 100-year average for all baseline onsite carbon stocks (IFM 1 – Aboveground, IFM 1 – Belowground, and IFM 3) and harvested wood products (carbon in trees harvested for wood products and carbon in harvested wood delivered to mills) listed by category and metric tonnes CO₂e per acre.

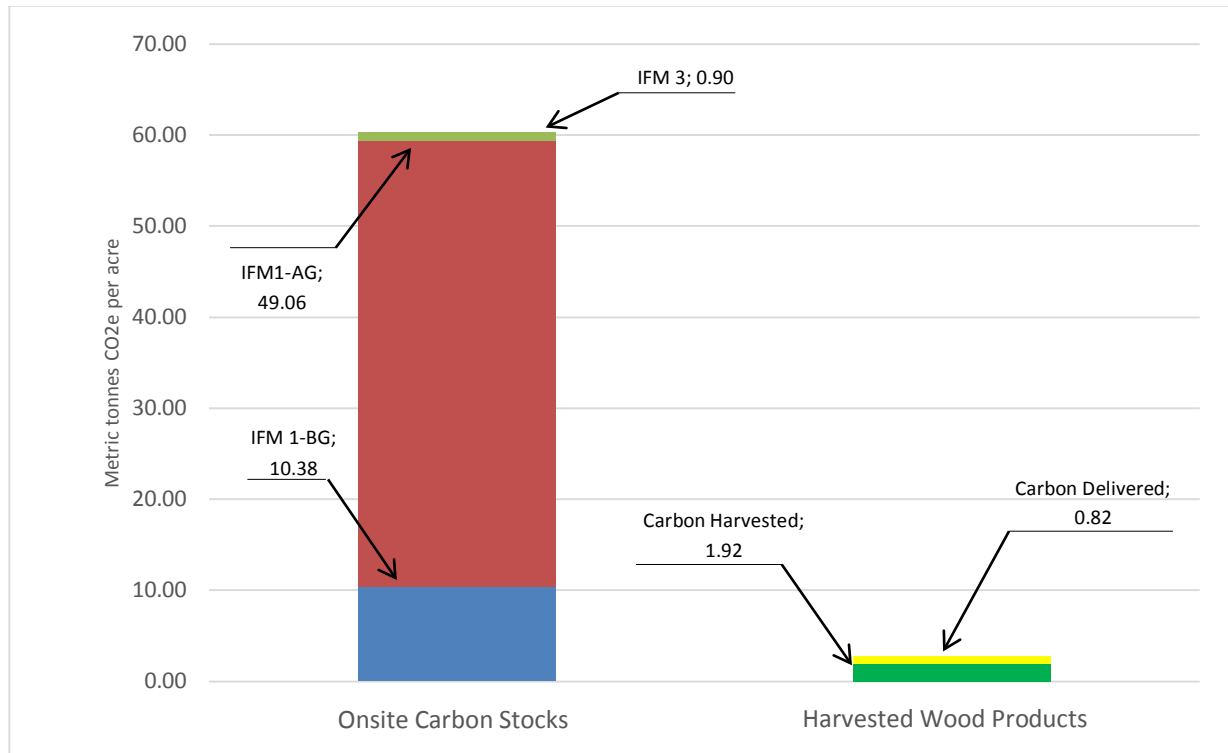

Figure 2. Average Baseline Carbon Stocks: Onsite Carbon Stocks and Harvested Wood Products (tCO₂e/acre)
