

MRC Albion IFM

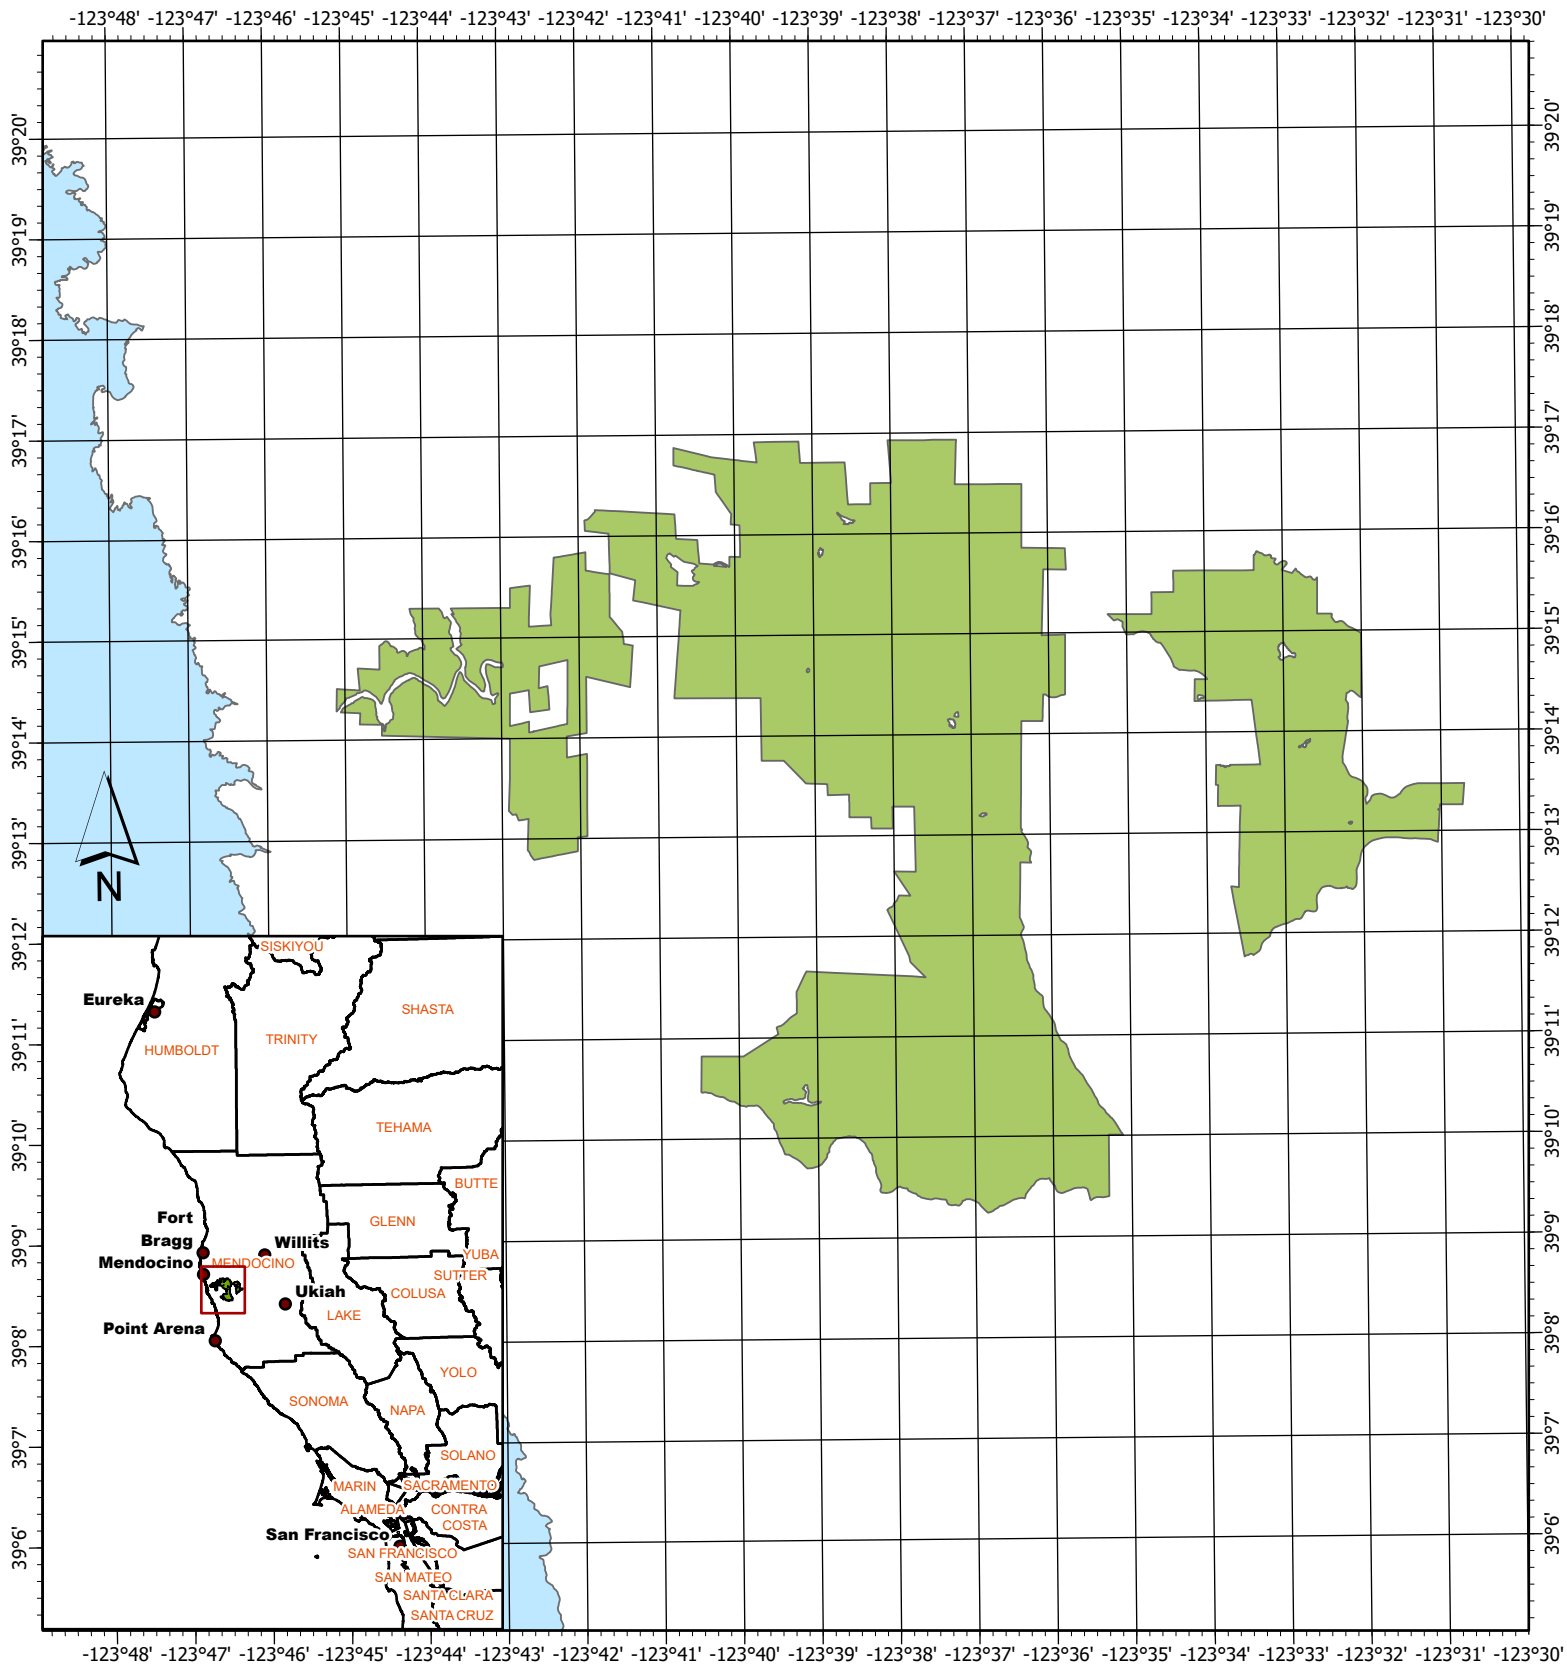

ATTACHMENTS E & F

This attachment contains the following maps of the Project Area as listed in the listing document.

1. Map showing latitude/longitude coordinates.
2. Map showing Roads and Towns.
3. Map showing Watercourses and Watersheds.
4. Map showing Topography.
5. Map showing Townships, ranges, and sections.
6. Description of land cover and land use
7. Description of Forest vegetation types
8. Description of site classes
9. Description of land pressures and climate zone/classification
10. Description of historical land uses, current zoning, and projected land use within the Project Area
11. Map showing Canopy Cover.

Maps listed from 1 – 10 fulfil the requirements for Attachment E.

Item 11 provides supporting documentation that the offset project takes place on land that has greater than 10% tree canopy cover. Thus, the map of canopy cover fulfills the requirements for Attachment F.

MRC Albion IFM Project

1 inch = 2 miles

 Project Area

Map showing PLSS and/or Lat. & Long.

These lands belong to the Mendocino Redwood Company, LLC situated in the Mendocino County of the State of California.

These lands are part of an Improved Forest Management project developed using the ARB Compliance Offset Protocol for U.S Forest Projects.

MRC Albion IFM Project

1 inch = 2 miles

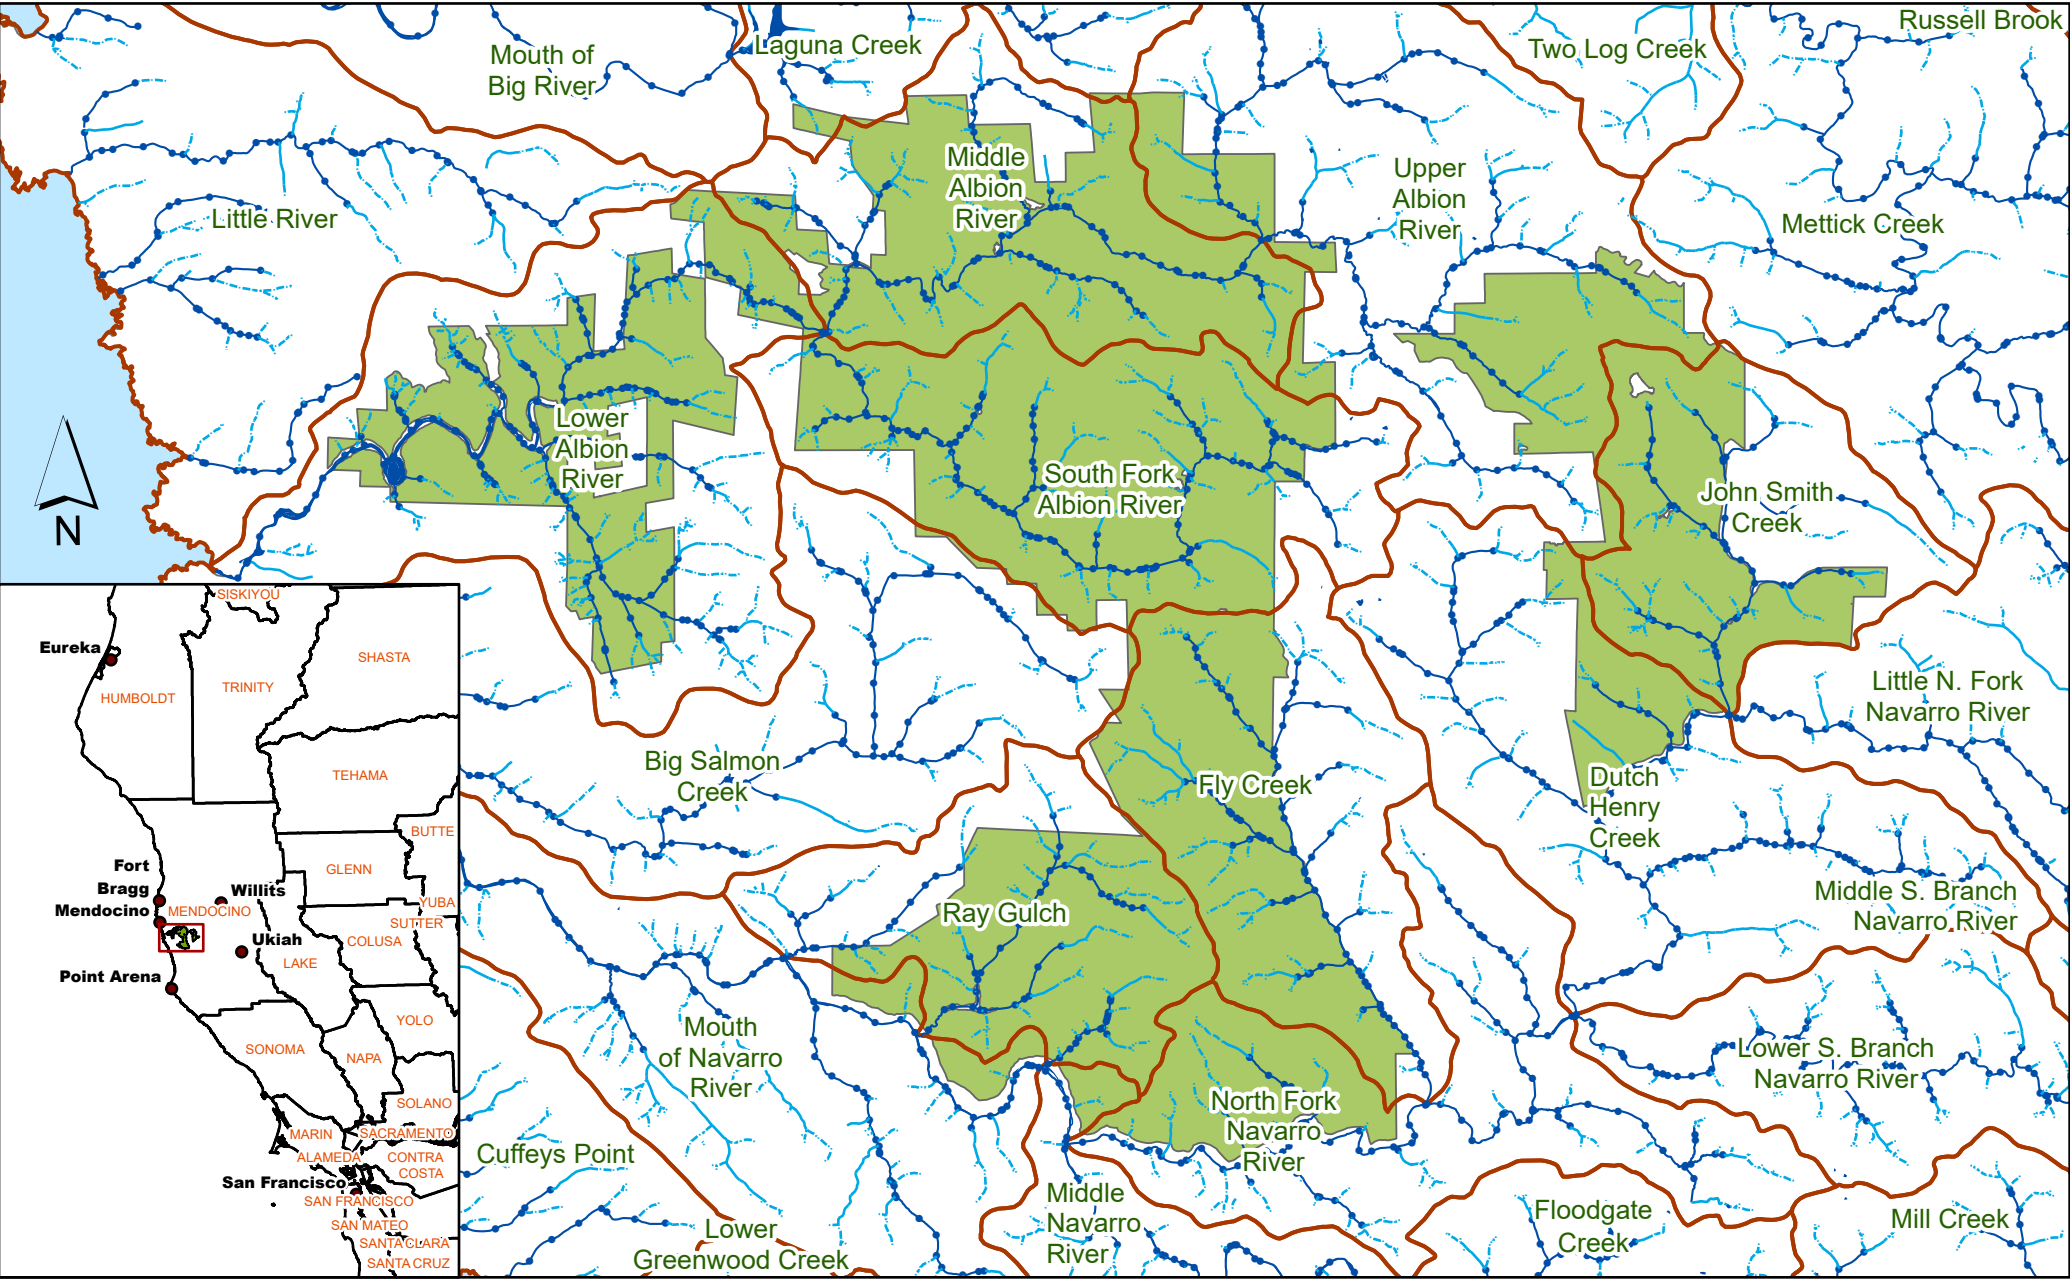

- Towns and Cities
- Major Roads
- State Routes
- Project Area

Map showing Roads and Towns

These lands belong to the Mendocino Redwood Company, LLC situated in the Mendocino County of the State of California.

These lands are part of an Improved Forest Management project developed using the ARB Compliance Offset Protocol for U.S Forest Projects.

Watersheds

Watercourses

- Class I
- Class II Large
- Class II Standard

- Project Area

Map showing Townships, Ranges, and Sections

These lands belong to the Mendocino Redwood Company, LLC situated in the Mendocino County of the State of California.

These lands are part of an Improved Forest Management project developed using the ARB Compliance Offset Protocol for U.S Forest Projects.

6. Existing land cover and land use (description with optional shapefile)

The land cover in the Project Area is conifer dominated forestlands composed mainly of Coastal redwoods and Douglas-fir forests.

Land use is commercial forestry.

7. Forest vegetation types (description with optional shapefile)

The Project Area consists of Conifer dominant forests (83% conifer and 17% hardwood) which are predominantly made up of redwood (*Sequoia sempervirens* (Lamb. ex D. Don) Endl.), Douglas-fir (*Pseudotsuga menziesii* (Mirb.) Franco var. *menziesii*), and Tanoak (*Notholithocarpus densiflorus* (Hook. & Arn.) P.S. Manos, C.H. Cannon, & S.H. Oh var. *densiflorus*) species.

8. Site classes (description with optional shapefile)

Based on the site index calculated using the USGS soils data and Krumland et al. (1972), 48% of the Project Area was classified as site class II, 40% as site class III, and 12% as site class I.

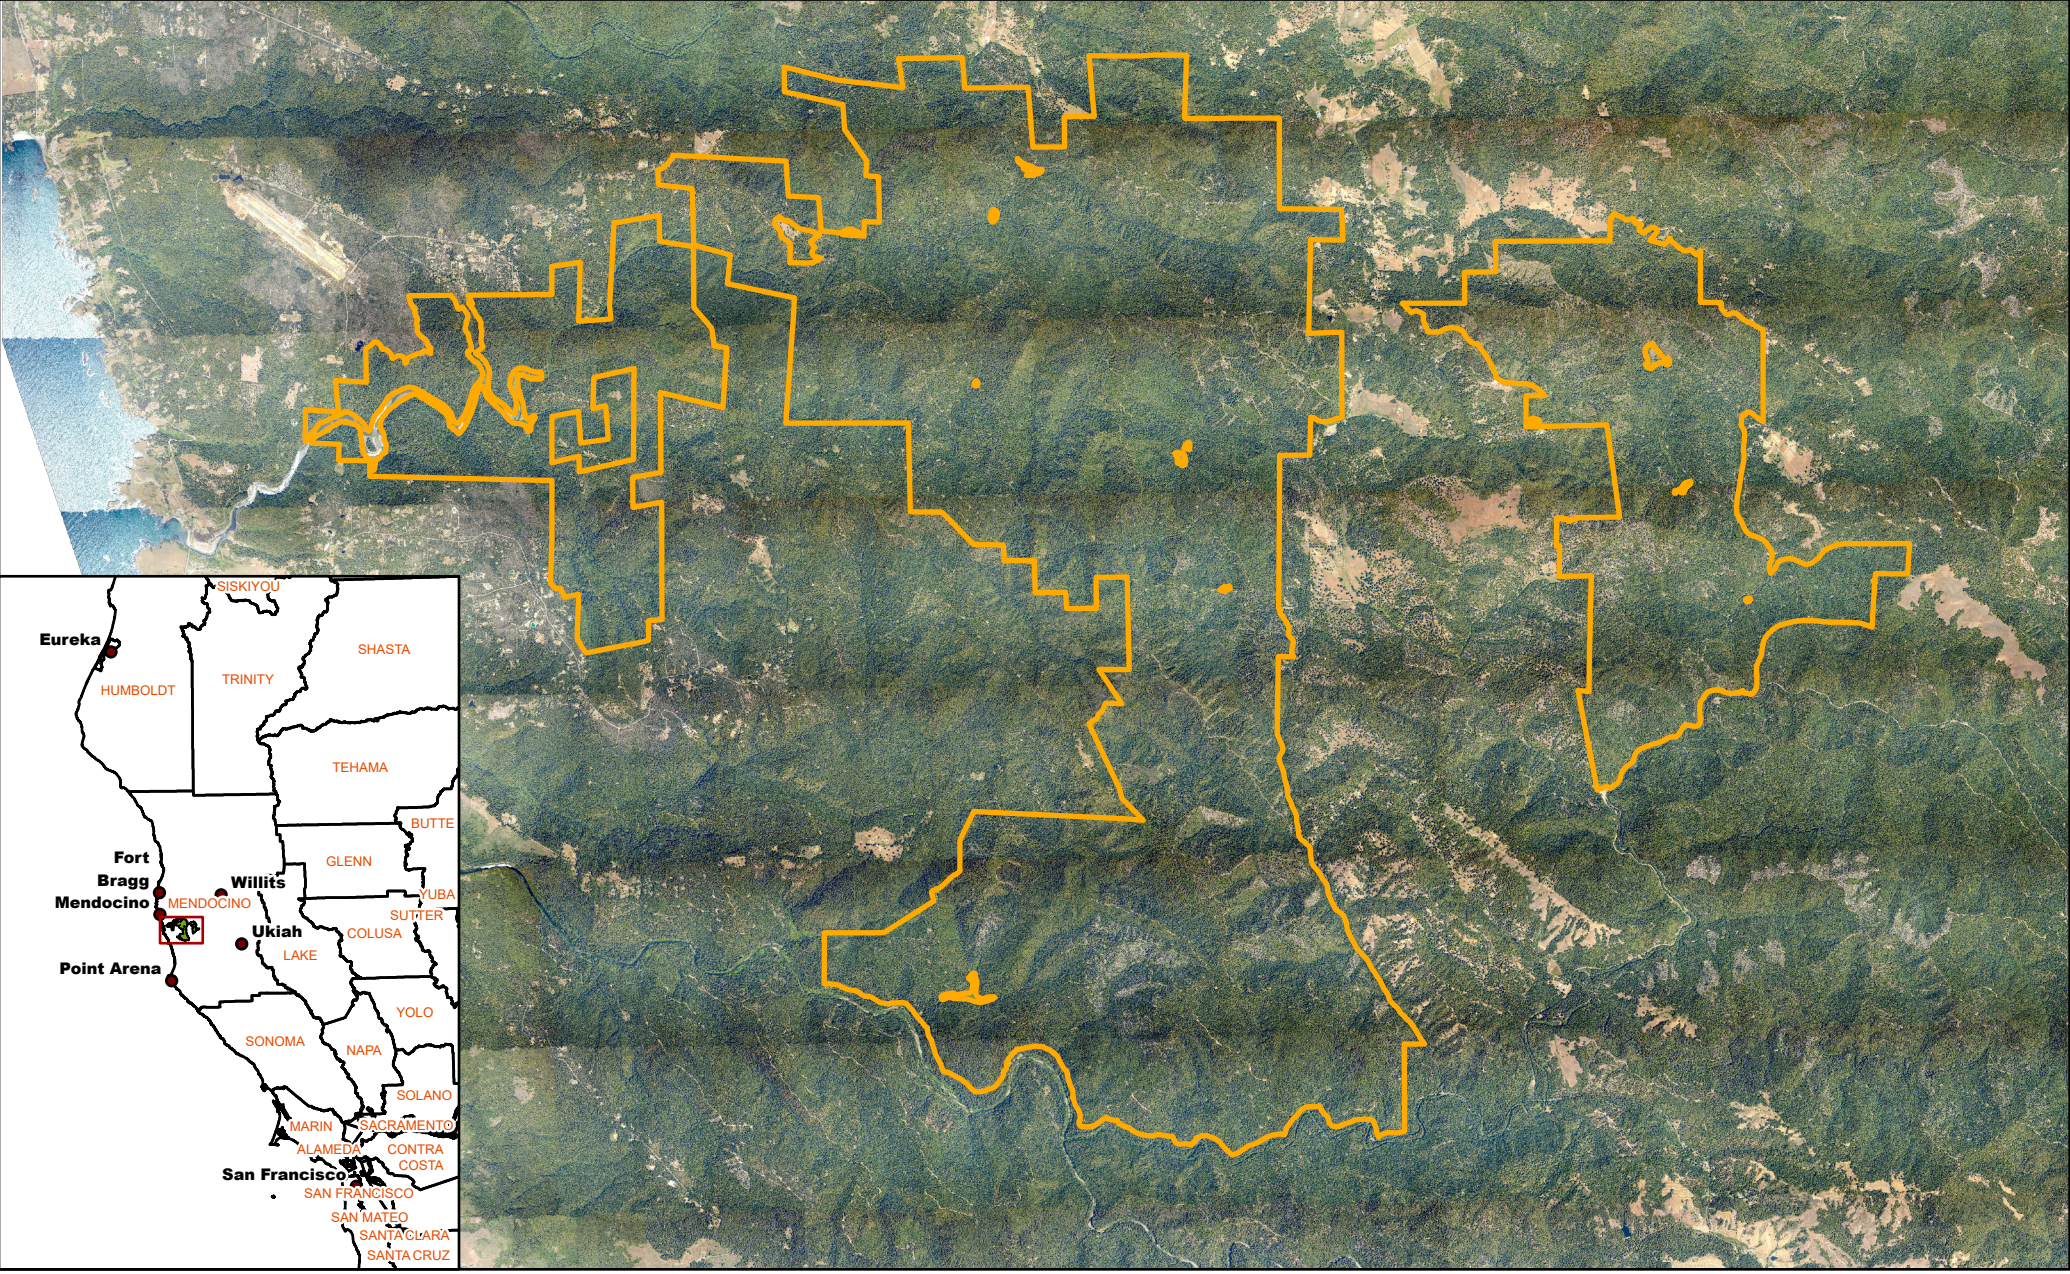

9. Land pressures and climate zone/classification (description with optional shapefile)

Limited land pressures within the Project Area for development where the primary land use is timber management. The project falls within the 9b (25 to 30 °F/-3.9 to -1.1 °C) climate zone according to the USDA Plant Hardiness Zone Map.

10. Historical land uses, current zoning, and projected land use within the Project Area (description with optional shapefile)

These lands have been managed for timber production dating back to the early 1850s by a series of landowners prior to ownership by the Mendocino Redwood Company, LLC.

Projected land use within the Project Area is the continued management of forestlands for a sustainable production of redwood and Douglas-fir trees with increased inventory over time.
