Forest Project Annual Monitoring Report

Monitoring Report. You will need to consult the Forest Project Protocol for details about the information this form requires. Use additional space or attachments as required.

Project Developer	Bascom Pacific, LLC
Project Name	McCloud River
Name of Individual Completing Report	Patrick Clune
Date	12/10/2018
Reporting Year	2017
Initial Reporting Year	2006
Year of last verification	2015
Year of next verification	2021
Measurement Method	☐ Direct Sampling
	☐ Modeling
	☒ Combination

I. Leakage Assessment

1. Have your organizational boundaries changed in this reporting year due to structural changes (mergers, divestitures, etc.)?

☒ No.

☐ Yes. Please describe:

2. Have you developed an entity baseline?

☒ No. Please answer question 3A.

☐ Yes. Please answer question 3B.

3. In either question 3A. or question 3B. below, please state your estimated total carbon stocks and emissions for the year.

A. Projected Change in Carbon Stock (No Baseline projection)

	Carbon Stocks (Metric Carbon Dioxide Tons Equivalent)
Current Year Estimate	3,620,867
Prior Year Estimate	3,645,501
Change from Current Year Estimate	24,634 decrease from 2016 to 2017

B. Projected Change in Carbon Stock (Baseline projection)

	Carbon Stocks (Metric Carbon Dioxide Tons Equivalent)
Current Year Estimate	
Entity Baseline Projection	
Change from Entity Baseline Projection	

i. Has there been a change from your baseline projected carbon stocks for this year?

- ☐ No.
☐ Yes.

ii. If so, what caused the change?

- ☐ Change in harvest schedule
☐ Inaccurate growth assumptions
☐ Inventory updates
☐ Natural disturbances. Please explain any disturbances (tree removals, natural significant disturbances etc.) that occurred, the date of the disturbance(s), the extent of the disturbance and whether it was originally included in your original projected entity activities.
☐ Other. Please explain.

Disturbance	Date Occurred	Extent of Disturbance	Included in original activities?

iii. If a natural disturbance occurred, please indicate when your next direct measurement will take place (must be within 3 years of the time of the significant disturbance).

--

4. What are the causes of any changes from projected stocks? Explain any significant increase or decrease in stocks that took place during the reporting year.

Cause	Estimated Impact	Description
☐ Normal sampling variation		
☐ Pest infestation		
☐ Fire		

☐ Change in harvest schedule		
☐ Other		

5. Have you initiated any new forest projects in this reporting year?

☒ No.

☐ Yes. Project Name:

6. Have you, to the best of your knowledge followed the reporting requirements set forth in the Forest Project Protocol?

☒ Yes

☐ No. Please explain.

--

7. Is there any information you would like to additionally report to the Registry to describe your forest activities this year?

☒ No.

☐ Yes. Please explain.

--

8. Please identify and briefly describe any voluntary agreements that you have entered into within the past year that may impact your project's forest carbon stocks (e.g. habitat conservation plan).

N/A

II. Activity-Shifting Leakage

On-site:

1. If your project's physical boundaries are smaller than your entity's physical boundaries: have your entity's forest carbon stocks outside of the forest project boundary, but within your entity boundary, decreased over the past year?

☐ No.

☒ Yes. If yes, please answer questions A –F.

A. Is this decline consistent with your established entity baseline (if applicable)?

☐ No.

☐ Yes.

B. If this decline is not reflected in an established entity baseline, please explain the reason for the decline in stocks.

See Response to 1.C below

C. If your decline in entity stocks is not a result of activity-shifting leakage on-site, please explain how one of the exceptions in Part II, Section H of the Forest Project Protocol (Version 2.1) is applicable.

The decline is part of the entity's overall management plan (established independently of the carbon project). Such stocks show a net increase over the duration of the project.
--

D. If you have established an entity baseline and your annual entity results indicate a negative deviation from the baseline, please calculate the difference between the entity baseline carbon stocks and annual reported amount and state the amount here.

	Carbon Stocks (Metric Carbon Dioxide Tons Equivalent)
Entity Baseline	
Actual Annual	
Change from Entity Baseline	

- E. If you have not established an entity baseline and your reported annual entity stocks show a decline from the previous reporting year, please calculate the difference and state the amount here.

	Carbon Stocks (Metric Carbon Dioxide Tons Equivalent)
Current Year Estimate	2,206,437
Prior Year Estimate	2,230,653
Change from Current Year Estimate	24,217 decrease from 2016 to 2017

- F. Please state the amount of on-site activity-shifting leakage that you attribute to your project over the past year.

None. Harvest levels on non-project lands are not influenced by project harvest levels.

Off-site:

2. Is there any evidence that your project caused another entity to change its operations or business activities?

☒ No.

☐ Yes. If so, what are the GHG implications of the changes to the other organization's activities?

- A. Does this represent positive or negative leakage?

☐ Positive.

☐ Negative.

- B. Does it impact operations or business activities?

☐ No.

☐ Yes. If so, will these changes impact GHG emissions? Is this positive or negative leakage?

3. (Optional) Estimate the amount of carbon (in (Metric Carbon Dioxide Tons Equivalent) that will be lost due to activity-shifting leakage that occurred offsite in the past year.

.....
I have completed and/or reviewed this form, and believe it contains the most accurate data and information possible.

Signature of Individual Completing Report: _____

Patrick Clune

Written Attestation Regarding On-site Activity-shifting Leakage

This statement serves as an assurance that activity-shifting leakage ☐ has ☒ has not been detected during annual monitoring of the project.

If activity-shifting leakage has been detected, please describe the nature and extent of the leakage:

Additional Supporting Rationale:

Please estimate the amount of emissions caused by the leakage:
