1 PROJECT DETAILS

1.1 Summary Description of the Implementation Status of the Project

The project activity is the bundling of **396** Wind Turbine Generators (WTGs) sponsored by 201 individual investors aggregating to a total installed capacity of **236.05 MW**. All these WTGs are spread in the entire State of Tamilnadu, India and the bundling activity is undertaken by Tamilnadu Spinning Mills Association (TASMA). All these WTGs are commissioned and connected to the Southern Regional Grid, India.

The intent of the Project Activity is to reduce GHG emissions and promote sustainable development by use of renewable energy (Wind) for generation of power by bringing together a number of investors with small power requirements to invest into wind turbines. In the absence of the project activity, the equivalent amount of electricity would have been generated by the power plants connected with the southern grid which is predominantly based on fossil fuel.

Purpose of the project activity:

The purpose of the project activity is to generate clean electrical energy through sustainable means using wind power resources. The Wind mill investors have aimed either to wheel such generated power to its own facility to meet out its captive electricity demand or selling it to the State Electricity Utility. In this bundled project activity, the power generation from 194 WTGs is wheeled by respective Sub-bundle investors for captive consumption and the power generation from 202 WTGs would sell to grid. In both the cases, such generated electricity from renewable source would contribute to climate change mitigation efforts.

Pre Project scenario:

The bundled project activity is the Greenfield project activity and in the absence of the project activity, the equivalent amount of power as generated by the project activity would have been generated by power plants connected to the Southern regional Grid which are pre-dominantly fossil fuel based power plants.

WTGs commissioning details:

The project activity not claiming any other form of credits like CERs or GS VERs. The project activity also not registered in REC mechanism and not claiming any REC benefits.

1.11 Sustainable Development

The project activity contributes to sustainable development in the following manner.

Social well-being:

- Improves electricity availability in the region and reduces electricity deficit situation in Tamilnadu;

- Contribution towards the policy objectives of Government of India and Government of Tamilnadu of incremental capacity from renewable sources;
- The Project activity has created employment opportunities for the local people during the erection and commissioning of the WTG;
- Project activity promotes infrastructural development like approach roads in the areas where the Project activity is located.

Economic well-being:

- The project activity results in generation of additional employment opportunities directly and indirectly which helps improving the standard of living of the people in and around the project activity location.
- VCS provides financial incentives, which encourage channelling more investment into cleaner energy projects and also result in improved returns to the project stakeholders.
- It also promotes industrial growth by catering to the energy needs arising out of the supply-demand gap of electricity.
- Infrastructural development conceive from implementation of project activity shall lead to the economic development of the local people.

Environmental well-being:

- CO₂ abatement through use of renewable energy.
- The project activity does not lead to any emissions like (SO_x, NO_x, Suspended Particulate Matters (SPM), etc). Thus the project activity would displace an equivalent quantum of electricity generated by the fossil fuel dominated grid-mix, thus resulting in reduction of the corresponding local air pollutants (NO_x, SO₂, Suspended Particulate Matters (SPM), etc) and environmental impacts caused by usage of fossil fuels for electricity generation.
- Use of renewable energy source (wind energy) for energy generation helps in conservation of natural resources like coal and petroleum fuels.

Technological well-being:

- The technology leads to utilization of environmentally safe and sound technologies in power sector. The project demonstrates harnessing only wind power potential in the region and doesn't consume any depleting resources like coal and other fossil fuel resources. Hence the project technology contributes to the national energy and ecological security
- The project encourages other promoters to adopt similar technology in the relevant sector and hence the project leads to technological well being.
- Increased investment in wind energy projects will further push R&D efforts by technology providers to develop more efficient and better machinery in future.

2 SAFEGUARDS

2.1 No Net Harm

There is no net harm arising out of the project activity since the project activity generates power by using the kinetic energy of wind, thus resulting in zero emissions during electricity production.

No negative environmental and socio-economic impacts was created on the environment. Thus, no net harm caused.

Moreover, Wind energy generation is a clean technology for production of electricity, with no emission of Green House Gases. The project activity has employed Horizontal Axis WTGs of different capacities. All the WTGs deployed in the project activity are from well-known international manufacturers. All these machines are type tested and approved by the Ministry of New and Renewable Energy (MNRE), Government of India.

2.2 Local Stakeholder Consultation

The Project is already registered with VCS and registered VCS Project Description; sections 6 provides the reference for the Local Stakeholder Consultation Process as in-line with VCS requirement.

Since the project do not involve any Project Emissions (or) Leakage Emissions and further the Wind Turbine Generators do not require any Environmental Impact Assessment (EIA) study to be conducted in India, the Project Proponent has not conducted any Local Stakeholder Consultation post commencement of the project activity. However, the PP has conducted a Local Stake Holder Consultation process as per the CDM/ VCS norms prior to validation process i.e. at the time of conceptualization of this project and no adverse effects were found.

Ongoing communication with stakeholders and interested parties is maintained through an open invitation of feedback and criticism. Up to the date of preparation of this report, there are no adverse comments from stakeholders regarding implementation of the project.

2.3 AFOLU-Specific Safeguards

Not Applicable

3 IMPLEMENTATION STATUS

3.1 Implementation Status of the Project Activity

The project activity consists of 396 Wind Turbine Generators sponsored by 201 individual investors accumulating to a total capacity of 256.05 MW in the State of Tamilnadu. All these WTGs are commissioned and connected to the Southern Regional Grid, India. The details of the WEGs installed in the project activity are given in the Appendix. The project activity generates power by using the kinetic energy of wind, thus resulting in zero emissions during electricity production. The electricity thus generated is being used in one of the following manners:

1. Export the entire energy to the southern grid
(Or)
2. Wheel the required energy for captive consumption and banking the surplus energy or exporting the surplus energy to the grid.

The power produced from the project thus displaces an equivalent amount of power generated through fossil fuel-based power generation sources. Hence, it results in the reduction of GHG emissions in electricity generation.

The project activity is commissioned as described in the project description document and the project is also continuing its operations except some routine maintenance and breakdown of the WEGs. There are no major events that may impact the GHG emission reductions or removals and monitoring during the current monitoring period. The details of the WEGs are as presented in the Appendix I.

3.2 Deviations

3.2.1 Methodology Deviations

No deviation from methodology is sought during this monitoring period.

3.2.2 Project Description Deviations

There is no deviation for this monitoring period.

3.3 Grouped Projects

This is not a grouped project.

$$EG_{PJ,y} = 2,408,416.51 \text{ MWh}$$

$EF_{grid,CM,y}$ – Baseline Emission Factor (combined margin)

$$EF_{grid,CM,y} (tCO_2e/MWh) = W_{OM} * EF_{grid,OM,y} (tCO_2e/MWh) + W_{BM} * EF_{grid,BM,y} (tCO_2e/MWh) \\ = (0.75 * 0.96729) + (0.25 * 0.76)$$

$$EF_{grid,CM,y} (tCO_2e/MWh) = 0.91547 \text{ tCO}_2e/MWh$$

Base Line Emissions: (BE_y)

According to the validated PD, Baseline Emission is calculated by the following formula.

$$BE_y = EG_{PJ,y} * EF_{grid,CM,y} \\ = 2,408,416.51 \text{ MWh} * 0.91547 \text{ tCO}_2e/MWh \\ \text{Hence, } BE_y = 2,204,842 \text{ tCO}_2e$$

5.2 Project Emissions

According to the validated PD, there is no project emission for grid connected wind based power generation. Hence, in this case it is considered as

$$PE_y = 0 \text{ tCO}_2/\text{year}$$

Where, PE_y - Project Emission for the year

5.3 Leakage

There is no leakage involved in the project activity.
Hence, $L_y = 0 \text{ tCO}_2/\text{year}$

5.4 Net GHG Emission Reductions and Removals

For a given year, the emission reductions contributed by the project activity (ER_y) is calculated and tabulated in the table as follows:

$$ER_y = BE_y - PE_y - L_y$$

Where,

ER_y = Emission reductions for the year
 BE_y = Baseline Emissions for the year
 PE_y = Project Emissions for the year
 L_y = Leakage for the year

Year	Baseline emissions or removals (tCO _{2e})	Project emissions or removals (tCO _{2e})	Leakage emissions (tCO _{2e})	Net GHG emission reductions or removals (tCO _{2e})
2014	4,44,781	0	0	4,44,781
2015	4,48,227	0	0	4,48,227
2016	4,38,346	0	0	4,38,346
2017	4,35,451	0	0	4,35,451
2018	4,38,037	0	0	4,38,037
Total	22,04,842	0	0	22,04,842

The comparison of actual emission reductions by sinks with estimates in validated PD is given below:

Year	Values estimated in the ex-ante calculation of Validated PD	Actual value achieved during this monitoring period	Difference in VER
2014	4,48,827	4,44,781	-0.90%
2015	4,48,827	4,48,227	-0.13%
2016	4,48,827	4,38,346	-2.34%
2017	4,48,827	4,35,451	-2.98%
2018	4,48,827	4,38,037	-2.40%
Total	22,44,135	22,04,842	-1.75%

The reason for the difference in Emission Reductions, are due to the following factors which cannot be anticipated by the PP more accurately.

- Wind availability/ Wind Speed
- Grid availability
- Machine availability

However, from the above table, it is clear that the net difference is well within the limits and hence, no adverse effect is found.
