1 PROJECT DETAILS

1.1 Summary Description of the Implementation Status of the Project

The project activity is the bundling of **396** Wind Turbine Generators (WTGs) sponsored by **201** individual investors aggregating to a total installed capacity of **236.05 MW**. All these WTGs are spread in the entire State of Tamilnadu, India and the bundling activity is undertaken by Tamilnadu Spinning Mills Association (TASMA). All these WTGs are commissioned and connected to the Southern Regional Grid, India. There are no changes in the implementation and it is in line with the registered PD.

The intent of the Project Activity is to reduce GHG emissions and promote sustainable development by use of renewable energy (Wind) for generation of power by bringing together a number of investors with small power requirements to invest into wind turbines. In the absence of the project activity, the equivalent amount of electricity would have been generated by the power plants connected with the southern grid which is predominantly based on fossil fuel. The implementation status of the Project Activity is as given below;

1.11 Sustainable Development

The project activity contributes to sustainable development in the following manner.

Social well-being:

- Improves electricity availability in the region and reduces electricity deficit situation in Tamilnadu;
- Contribution towards the policy objectives of Government of India and Government of Tamilnadu of incremental capacity from renewable sources;
- The Project activity has created employment opportunities for the local people during the erection and commissioning of the WTG;
- Project activity promotes infrastructural development like approach roads in the areas where the Project activity is located.

Economic well-being:

- The project activity results in generation of additional employment opportunities directly and indirectly which helps improving the standard of living of the people in and around the project activity location.
- VCS provides financial incentives, which encourage channeling more investment into cleaner energy projects and also result in improved returns to the project stakeholders.
- It also promotes industrial growth by catering to the energy needs arising out of the supply demand gap of electricity.
- Infrastructural development conceive from implementation of project activity shall lead to the economic development of the local people.

Environmental well-being:

- CO2 abatement through use of renewable energy.
- The project activity does not lead to any emissions like (SOx, NOx, Suspended Particulate Matters (SPM), etc). Thus, the project activity would displace an equivalent quantum of electricity generated by the fossil fuel dominated grid-mix, thus resulting in reduction of the corresponding local air pollutants (NOx, SO2, Suspended Particulate Matters (SPM), etc) and environmental impacts caused by usage of fossil fuels for electricity generation.
- Use of renewable energy source (wind energy) for energy generation helps in conservation of natural resources like coal and petroleum fuels.

Technological well-being:

- The technology leads to utilization of environmentally safe and sound technologies in power sector. The project demonstrates harnessing only wind power potential in the region and doesn't consume any depleting resources like coal and other fossil fuel resources. Hence the project technology contributes to the national energy and ecological security.
- The project encourages other promoters to adopt similar technology in the relevant sector and hence the project leads to technological well-being.
- Increased investment in wind energy projects will further push R&D efforts by technology providers to develop more efficient and better machinery in future.

2 SAFEGUARDS

2.1 No Net Harm

There is no negative environmental and socio-economic impact.

The wind power being a cleaner source for electricity generation does not require compliance of any local laws and regulations. However, the essential documents like No Objection Certificate (NOC), Energy Purchase Agreement or Energy Wheeling Agreement have been executed with TNEB/TANGEDCO before the start date of the individual WTGs.

Table: Relevant applicable laws & regulations and Compliance status of the project activity

Regulations	Compliance status
NOC from TNEB	Complied
EPA with TNEB (if sale to utility)	Complied
EWA with TNEB (if wheeling)	Complied

2.2 Local Stakeholder Consultation

The local stakeholders have already been contacted for the first bundled CDM project of TASMA. For the second project, a questionnaire survey was conducted covering the people living in the villages nearby the site. The overall opinion expressed through the questionnaire was based on the experience of the local stake holders with the already existing windmills. The overall response was that the impact of windmills in the locality is of positive nature. The responses are categorised as positive and negative based on the comments. The positive responses indicate that respondent feels that the project activity will lead to overall good for the society. All of the individual respondents are of the view that the project activity is of good to them and to the society as well. It has really added to the electricity generation of the state grid without causing any pollution. No negative comments were received that required follow up action.

3 IMPLEMENTATION STATUS

3.1 Implementation Status of the Project Activity

All the WTGs are operating continuously depending on the wind availability. The electricity available for carbon credit for this monitoring period is 560,798 MWh (rounded down).

All the WTGs involved in the project activity are already commissioned and operational. The WTGs are under operation since the date of commissioning and no event has been identified which may impact GHG emission reduction.

3.2 Deviations

3.2.1 Methodology Deviations

There is no Methodology deviation in the current monitoring period.

3.2.2 Project Description Deviations

The initial commissioning date of the WTGs is considered as the initial calibration date of the energy meters, which is in line with the registered monitoring plan. Further, these meters are certified as factory calibrated by the manufacturer and are installed by the regulatory authority (TNEB/TANGEDCO) as per the requirements in the power purchase agreements. The project deviation relates that if the meters are commissioned and the initial calibration is done by the manufacturer, the validity of the calibration, up to a period of five years in the subsequent monitoring periods can be cross checked by verification of the monthly invoices raised by the PP for the electricity generation, which is indicative of the accurate functioning of the energy meters as the invoices are based on the joint meter readings, agreed by the PP and the regulatory authority. The validity of calibration for a period of five years is in line with the registered monitoring plan and CEA guidelines, 2006.

However, the above Project description deviations are not pertaining to the current monitoring period and it pertains to the 1st monitoring period i.e., between 16-February-2010 & 31-December-2013 (both the days inclusive). In the current monitoring period, there are no project deviations.

3.3 Grouped Projects

This is not a grouped project.

4.3 Monitoring Plan

The monitoring activity will be centrally executed by TASMA. The organization for monitoring will be as follows:

The responsibilities of Management structure are

1. TASMA:

- a. Reviewing the monthly and annual statistics.
- b. Evaluating the GHG performance of the project activity.
- c. Identify opportunities for further improvement.

2. Regional representative:

- a. Reviewing the GHG performance related parameters as recorded by the Site In-Charge regularly.
- b. Implementation of appropriate corrective measures in case any discrepancies are identified in the reported parameters.

- c. Ensuring calibration of the monitoring equipment as per the defined calibration schedule

3. Site In-charge:

The Site In-charge (O&M Service provider/Company personnel) besides operation and maintenance of the wind turbine generators will record monthly energy meter reading jointly with TNEB officials and submits the generation Statement to the TASMA as and when called for.

The **Metering** for WTGs of the project activity is carried out as under:

The monthly meter reading is being taken jointly by the Parties (TNEB/TANGEDCO and the Site In-charge) on a fixed day of the month. At the conclusion of meter reading on each occasion, an appointed representative of the TNEB/TANGEDCO shall sign the meter card provided for this purpose and the entries made is verified by the site in-charges. The TNEB/TANGEDCO meter reading is used for recording electricity generation and the same is sealed by TNEB/TANGEDCO and shall not be interfered other than TNEB/TANGEDCO personnel. Emission reduction calculation is based on the Generation Statement issued by TNEB/TANGEDCO.

Internal Compliances & Non-Conformities:

TASMA & its management representatives called for all the details pertaining to the individual windmills through their regional representatives like the JMRs, Calibration records and other necessary information as may be required to prepare the Monitoring Report. After, collection of the same, TASMA through their management representatives compiled all the necessary details as required to prepare the initial draft Monitoring Report. Thereafter, TASMA reconciled the individual windmill's total generations data along with other necessary documents with the independent sub-project proponents and checked for any non-conformities. After confirming that there are no deviations and no non-conformities witnessed in this project for this monitoring period, TASMA prepared and concluded this final Monitoring Report.

5 QUANTIFICATION OF GHG EMISSION REDUCTIONS AND REMOVALS

5.1 Baseline Emissions

Baseline emissions calculated are summarized as below.

Base Line Emissions: (BE_y)

According to the validated PD, Baseline Emission is calculated by the following formula.

$$BE_y = EG_{PJy} * EF_{CMY}$$

Baseline emission factor (combined margin)

$$EF_{CMY} = 0.91547 \text{ tCO}_2\text{e/MWh}$$

$$EG_{PJy} = 560,798 \text{ MWh}$$

$$EG_y = 560,798 * 0.91547 = 513,393 \text{ tCO}_2\text{e (rounded)}$$

5.2 Project Emissions

Project Emissions: (PE_y)

According to ACM0002, there is no project emission for grid connected wind-based power generation. Hence in this case it is considered as **PE_y = 0 tCO₂/year**

5.3 Leakage

According to ACM0002, there is no leakage emission for grid connected wind-based power generation. Hence in this case it is considered as **LE_y = 0 tCO₂/year**

5.4 Net GHG Emission Reductions and Removals

Emissions Reduction: (ER_y)

For a given year, the emission reductions contributed by the project activity is calculated as follows:

$$ER_y = BE_y - PE_y - LE_y$$

Where,

ER_y – Emission Reductions for the year 'y'

BE_y - Base Line Emission for the year 'y'

PE_y - Project Emissions for the year 'y'

LE_y - Leakage for the year 'y'

Year	Baseline emissions or removals (tCO ₂ e)	Project emissions or removals (tCO ₂ e)	Leakage emissions (tCO ₂ e)	Net GHG emission reductions or removals (tCO ₂ e)
Year 2019	457,327	0	0	457,327
Year 2020 (upto 15 th Feb)	56,066	0	0	56,066
Total	513,393	0	0	513,393

Special Note:

The ex-ante annual average ERs are 417,392 tCO₂/ year

However, as per the registered VCS PD, Section 1.7, from the year 2012, all the Windmills have started its operation and accordingly the ex-ante estimated GHG ERs pertaining to the specific years are as follows;

For the year 2019 - 448,827 tCO₂

For the year 2020 (up to 15th Feb, 2020) - 54,857 tCO₂

Hence, the marginal increase in the actual generation is mainly due to the good wind availability, machine availability and grid availability.
