In the case of the hotels listed in this document, carbon neutrality of meetings and events is determined based on the following approach.

- The Hyatt hotels listed in this document use Hyatt EcoTrack, a global database to track utility, greenhouse gas emissions, and other sustainability data. Meeting-specific impacts are calculated using data provided by the applicable hotel in Hyatt EcoTrack, where such inputs are designed to follow the hotel Carbon Measurement Initiative (HCMI) methodology for the relevant room nights and the event space.
- The impact associated with a meeting or event is made carbon neutral using Renewable Energy Certificates and carbon offsets. The electricity used at these hotels is matched with Green-e Energy certified Renewable Energy Certificates. The remaining emissions are matched with Carbon Offsets.
- Event-specific data is reviewed internally and not third-party verified.
- Carbon offsets purchased for 2025:
