

ENOVA ENERJI URETİM A.Ş.

**CEYHAN HEPP, CEYHAN RIVER IN
OSMANIYE PROVINCE**

**REPORTING FORM FOR LAND
ACQUISITION / SOCIAL IMPACTS OF
PORTFOLIO PROJECTS.**

Reporting Form for Land Acquisition / Social Impacts of Portfolio Projects.

Name & Location of Sub-project: Ceyhan HEPP, Ceyhan River in Osmaniye Province.

Project Sponsor: Enova Enerji Üretim A.Ş. is the owner of the Ceyhan HEPP project. Enova Enerji is a company which was founded by Özaltın Construction and Nurool Group in order to operate in energy sector.

Project cost: The investment cost of Ceyhan HEPP is 156,000,000 \$ (VAT and interest cost are not included)

Installed generation capacity (No. units X MW/unit): Ceyhan HEPP consists of two power plant based on hydro resources found in the river Ceyhan . The first plant Ceyhan HEPP(Oşkan HEPP) has an installed power of 25 MW and the second one Ceyhan HEPP(Berkman HEPP) has 38 MW, both residing in Osmaniye. Oşkan has got 25 MW hydropower plant. 3 unit of Kaplan type turbines, each having the capacity of 8,33 MW will be used . Berkman has got 38 MW hydropower plant. 3 unit of Kaplan type turbines, each having the capacity of 12,67 MW will be used .

Key Dates of implementation : The Public Benefit Decision has been given on June 27th, 2007 by EMRA.

General Info : Enova A.Ş. initial approach for every project is to avoid social impacts, at any possible extent , particularly physical or economic displacement. The construction of project which is being supported by TSKB is currently underway and the land acquisition process has already finished.

For Ceyhan HEPP 3.183.101 m² of land will be affected, of which 2.065.575 m² belongs to the Forestry Department, 170.266 m² belongs to the Treasury and 947.260 m² is privately owned. The total number of people (number of share holders of real estates) affected from expropriation is 212 and 143 of them are male, 69 of them is female. Most of the plots have more than one owner (shared ownership) due to heritage but on the other hand generally one of the owners is using whole plot for generating income. According to the land list, there were not any houses which will be affected from expropriation.

Vegetables, crops and trees are compensated with reference to values provided by the provincial directorates of the Ministry of Agriculture. The Ministry updates these values on annual basis. In cases where values remain below market values, inflation rates are used to update values of crops. Also, a through a capitalisation formula, farmers are compensated for a transition period until they have acquired new land and started receiving yields.

For the expropriation of the immovable properties needed for the implementation of the project; an expropriation decision has been taken by the Energy Market Regulatory Board, pursuant to Article 15/c of the Electricity Market Law No. 4628 and Article 7 of the Expropriation Law No. 2942. Because the expropriation decision has enabled the enforcement of the “Council of Ministers Decree on the Application of Article 27 of Expropriation Law No. 2942 in the Expropriations to be Carried Out by the Energy Market Regulatory Authority” , published in the Official Gazette no. 25599 dated 30 September 2004, the Energy Market Regulatory Authority will file urgent expropriation lawsuits with the local Court of First Instance, with a request for the seizure of the immovable properties listed in the annexed list and the determination of expropriation fees.

The estimated expropriation fees to be determined as a result of the on-site examination to be performed by the court expert witnesses as a result of these lawsuits will be listed by indicating the owners and shareholders of the immovable properties to be expropriated, and they will be deposited with the bank as ready for payment. The related persons may withdraw the expropriation fees from the mentioned bank branches, by presenting the ID cards, certificate of inheritance or power of attorney.

For the finalization of these expropriation fees, the Energy Market Regulatory Authority Valuation Commission will also conduct a valuation work and conciliation meetings will be held on site through notices

to be sent to the owners of properties.

No villages are located within the areas directly impacted by the hydroelectric power plant projects. The Company will regularly update TSKB on land acquisition and resettlement .

In order to judge the impacts of land acquisition the following points are considered; compliance with legal legislation (official document listing existing water usage rights in that region, public benefit decision for expropriation- appropriation), any evidence related to the public opposition, amount of expropriation area, land usage type (agricultural, pasture, forestry, arid), number of affected persons, and investing company's intention for voluntary sale. Furthermore progress report of the project owner is followed, which informs the actual expropriation state.

Inventory of Land & Assets Acquired from Private Owners : The table is given in attached excel file, because the table has too many columns so that, it doesn't fit into word format.

Inventory of Public, Community, or State Land Acquired : The table is given in attached excel file, because the table has too many columns so that, it doesn't fit into word format.

Public Awareness, Consultations, and Communication :

In accordance with the EIA requirements in Turkey, Enova Enerji Üretim A.Ş., has held public hearing sessions for affected communities at its hydropower project sites. A Public Participation Meeting was held on April 10, 2009 in Karagedik Village of Düziçi Town. Invitations were announced in local and regional newspapers in advance. At the public opinion hearing sessions, available information about the project including the social and economic impact of the project were provided to the public. The environmental concerns and mitigation measures, technology proposed and detailed explanation of the applicable regulations was provided.. The meetings were followed by a site visit. Key issues raised by stakeholders at these meetings included requests for maximizing local employment, requests for further information regarding the land acquisition procedure, whether local people would benefit from power produced by the projects and whether water from the impoundments might be used for irrigation purposes. In response to these questions, the company has hired local people wherever possible (the most of the construction labour force comes from surrounding villages), has provided additional information on the land acquisition process and has indicated that it will discuss with Government the possibility of providing additional access across the Ceyhan River and whether water could in future be used for irrigation purposes. The construction of plant will have limited effects on the demographic conditions since the number of workers in the construction phase will be 400 people. (175 for Oşkan HPP, 225 for Berkman HPP) There will be no permanent living quarters associated with this power plant. Hence there will be no increased demand on local infrastructure, such as utilities, housing, medical facilities, schools, water and food. The project will not cause any displacement of individuals whose livelihood depends on the land that will be occupied by the Project. A total of 45 people will be employed during the operation phase of the project.

The personnel to be employed during the construction and operation phase will create employment for people in the project region which will contribute to income and livelihood of the local population.

The Project activities will not be causing any physical damages such as destroying of land of economical value (agricultural land, fruit gardens, shopping area) and/or public land such as forest area , land of cultural value or land housing infrastructure that would negatively affect the socio-economic environment in the Project region. There are no residential units within the project sites hence no re-settlement action will be required for the project activity. The project will not cause any changes in the current transportation system in the

region.

The Project is not expected to cause any major health risks on the population in the project region during the operation phase. All sorts of wastes will be handled safely and without public contact according to the national regulations. The personnel will be receiving health checks periodically in order to minimize the risk of an out-break of a communicable disease.

The stakeholders in the meeting were mostly the representatives of local administrative units mainly village heads (muhtar) from surrounding villages and the villagers. All the headings were held in Turkish. The environmental and social aspects were discussed by the stakeholders and clarifications were sought. The overall response to the project was positive.

The environmental and social aspects were discussed by the stakeholders and clarifications were sought. The overall response to the project was positive.

Some points have been emphasized by the stakeholders such as the village roads near the Project regions and employment of local people for the Project. The questions regarding employment were answered by the project participant. The PP stated that during the construction process, employees will be provided from local people. However, since the single computerized system requires certain skills, much qualified people will be necessary at the operation process.

The Project team ensured that all relevant national legislation will be respected and complied during the Project activities.

Stakeholder engagement beyond the EIA meetings and one-on-one discussions around land acquisition has been relatively informal to date, but based on interviews with community leaders, community-project relations are positive, mainly due to the large proportion of locally employed persons active at this phase of project development. Community concerns and requests for assistance are directed to Nurol and Özaltın Group's staff members. A range of corporate social investments has been made at each of the two projects currently under construction; these include elements such as road improvements, donation of computers to local municipal libraries, construction of new village access routes and the like.

TSKB's review indicates that local communities are supportive of these developments and that no community resistance to the construction of these projects has been identified to date. This is based on the outcomes of public hearings and TSKB site-level meetings with community leaders and some affected parties.

Status of Land Acquisition : The The table is given in attached excel file, because the table has too many columns so that, it doesn't fit into word format.

Other Measures or Assistance provided (beyond cash compensation) : A range of corporate social investments has been made at the project currently under construction; these include elements such as road improvements, renewing school and mosques, donation of computers to local municipal libraries, construction of new village access routes, etc. The company has hired local people wherever possible. (most of the construction labour force comes from surrounding villages)

Identification of Vulnerable People : There are no vulnerable people inhabiting the Project area. It has been determined via meeting with Village Headmen.

Grievance Redress : There is no grievance until now for the construction of our HEPP project. The relations between the people at the construction site and the villagers and headmen are held positive all the time.

Local people generally complaint to village headmen when there is a problem related with the project or any other issue related with daily life, and the village headmen makes the necessary action related with the

complaints. In other words, the village headmen is the key person to register grievances or complaints, and he/she makes the necessary steps to solve the problems.

Discussions with village Headmen and affected persons confirmed that the EIA consultation meetings have been the primary source of project information to date for local communities. In addition to the formal EIA meetings, a series of informal meetings have been held with all households whose land or homes are to be impacted by the project, in order to define the extent of affected property and to define and negotiate compensation amounts. Stakeholder engagement beyond the EIA meetings and one-to-one discussions around land acquisition has been relatively informal to date, but based on interviews with community leaders, community-project relations are positive, mainly due to the large proportion of locally employed persons active at this phase of project development.

KAMULAŞTIRILACAK TAŞINMAZ MALLAR LİSTESİ (ALAN-m ²) LIST OF REAL ESTATE TO BE EXPROPRIATED (m ²)

TOPLAM		3,183,101.000	3,183,101.000		

IMPORTANT NOTES :

1- All expropriation works has been transferred to Energy Market Regulatory Authority (EMRA). The company paid 5.250.000 USD to EMRA for expropriation. EMRA is making all the expropriation. The project has been delayed due to exproprition procedures and the process called fast exproprition has been applied.

2- PUBLIC LANDS : According to decree, 5 % of the sound value of the land will be calculated and remaining amount after deducting 85 % from this calculated value will be paid as rent or payment for usage rights.

3- FOREST LANDS : 5.000 TL/ha has been paid for once. 0,5 % of the project cost will be calculated and after 85 % deduction, remaining amount will be paid as payment for usage rights (Just for 10 years)
